

# SYSTEM AND METHOD OF MINIMALLY-INVASIVE EXOVASCULAR ANEURYSM TREATMENT

## ABSTRACT

5           This document discusses an exovascular approach to treating an aneurysm  
using a minimally-invasive instrument guided by magnetic resonance imaging  
(MRI), computed tomography (CT), or another suitable imaging device. A  
trajectory guide entry device assists in targeting the aneurysm and determining the  
proper trajectory thereto. Examples of the aneurysm treatment device include a clip,  
10   a clasp, a snare, a loop, a hook, a staple, and an electrocautery or other electrode, or  
any combination of such devices. The aneurysm treatment device is delivered by a  
probe, such as a tube or other catheter.
